Esc-Space Delete all spaces & tabs around cursor, leaving one space
Esc-Return Doubles (or multiples) current line
Esc-Up Scroll window so that current line is on Top of Window
Esc-Down Scroll window so that current line is Bottom of Window
Esc-Left Delete text from start of current line up to cursor position
Esc-Right Delete text from current cursor position until end of line

Shift Ctrl	X-Mark	X-Paste	X-Cut
	Select Font	Context Help	
	Select Buffer	Text Properties	Major Mode
			

Gold- <i>n</i> (prefix-arg)	Repeat next key <i>n</i> times (<i>n</i> is any sequence of digits) (<i>n</i> may be signed with + or - also, <i>n</i> =0 repeats until termination).
Gold- A	– Abbreviation mode on/off (abbreviations are file type sensitive).
Gold- B	– Buffer Menue (select, save or kill buffers).
Gold- C	– Quick Calculator (use <code>calc</code> for a full buffer version).
Gold- D	– Document browsing of INTES documents (Online-ASCII-Manuals).
Gold- E	– Execute the keyboard macro which was defined between Gold-(and Gold-).
Gold- F	– Load a File to a new buffer (standard file load).
Gold- H	– Split window at horizontal midline.
Gold- I	– Insert an interactive specified file at cursor position.
Gold- J	– Insert an interactive specified buffer at cursor position.
Gold- K	– Kill a buffer (shows all buffer and asks interactively).
Gold- L	– Load file to this buffer (overwrites current buffer, works like Gold- K and Gold- F).
Gold- N	– Put current buffer to end of buffer list and switch to next file buffer.
Gold- O	– Overwrite current buffer with the Original file (reload).
Gold- P	– Write Paste-Buffer to a given file.
Gold- Q	– Quit Emacs (asks for non-saved changed buffers).
Gold- R	– Recover file (get autosave file).
Gold- S	– Save file current buffer into file.
Gold- T	– Remove all trailing blanks (and Fortran line-numbers), expand TABs.
Gold- U	– Reload current file/buffer with UTF8 coding (force UTF8).
Gold- V	– Split window at vertical midline.
Gold- W	– Write buffer to other file (name of buffer is updated).
Gold- X	– Split whole screen into <i>n</i> windows (<i>n</i> is prefix-argument, default 3).
Gold- Y	– Enlarge Window (make other windows smaller).
Gold- Z	– Shrink Window (make other windows bigger).
Gold- Tab	– Update indent of current context (e.g. indent fortran subprogram).
Gold- Return	– Switch to/from Shell (create a new shell at first call).
Gold- Space	– Speedbar (needs corresponding java installation)
Gold- @	– Byte-Compile a Lisp file from disk (e.g. <code>test.el</code> → <code>test.elc</code>)
Gold- #	– Evaluate Lisp source code in current buffer.
Gold- &	– (Re)Activate Application Keypad & Cursor Keys on VT100/200/300-Terminals.
Gold- *	– Load multiple files (not directories) matching an Emacs regular expression.
Gold- !	– Show Emacs-Point-Information (character-info and Emacs-column).
Gold- ?	– Display column-ruler, current line, column number and (tty) page-number.
Gold- %	– Goto a given percentage-of-file position.
Gold- =	– Goto a given line number.
Gold- _	– Goto a given column position.
Gold- >	Gold- < – Narrow displayed&adressable text to current region resp. rewidened to full buffer.
Gold- (Gold-) – Start/end of keyboard macro definition (execute it with Gold- E).
Gold- [Gold-] – Show matching open/close-bracket for current text level (cursor level).
Gold- {	Gold- } – Show matching start/end of block for current text level (e.g. DO...ENDDO).
Gold- \$	– Test whole buffer for paragraphs containing mismatched parantheses.
Gold- ;	– Load the <code>.dir_title</code> file of current directory (template if new file).
Gold- .	– Jump to next (respectively last) mark position within mark-ring.
Gold- ~ (or ' ` ^ ~ /)	Toggle minor-mode for entering 8bit-characters, e.g. Gold- " makes the " -key a prefix key such that "a inserts ä , "s inserts ß etc. (" inserts ").
Help- ?	– Describe GOLD-Emacs Help facilities.
Help- Help	– Show Gold-Keypad and special Cursor-Keys.
Help- Help-Help	– List all non-keypad Gold-Keys.
Help- A	– Apropos Function (list all functions matching a RegExp-search-string).
Help- B	– Show description of Bulk Data keyword.
Help- C	– Show a PERMAS Call string or Common block (out of T _E X.chlp files).
Help- D	– Show a DMS data object with its reference (out of T _E X.chlp files).
Help- E	– Show PERMAS Errors from GNATS-DataBase.
Help- F	– Describe a Function (full documentation).
Help- G	– Show PERMAS Group Formats (FMT-Group).
Help- K	– Describe the now following key sequence (full documentation).
Help- M	– Display an Unix manual entry within a special buffer (man → buffer).
Help- N	– List new GOLD-Emacs features.
Help- R	– Show a help for Regular Expressions.
Help- S	– Spell checking word at cursor position (interactive ispell-word).
Help- T	– Show T _E X-Meaning of current keyword and explain TeX-Commands.
Help- U	– Show syntax and page reference for UCI keyword.
Help- V	– Describe a Variable (full documentation).
Help- W	– Where is function (which keystroke invokes given function) ?
Help- Tab	– Show and edit active tabulator settings.
Help- \$	– Show syntax and page reference for PERMAS data input (\$keyword).
Help- &	– Describe all keybindings (global map & current buffers's local map).
Help- *	– Describe current buffers's major mode (e.g. special keybindings etc.).
Help- any-other-key	Describe the typed key sequence briefly (one line information).

Interactive callable after Gold-Gold (respectively original Esc-X)

<code>calc</code>	Call an extended UPN calculator in its own buffer (compare to Gold- C). For radix transformations type input in form <i>radix#number</i> (e.g. 16#4A) and set display radix with <code>calc-hex-radix</code> , <code>calc-decimal-radix</code> or with S-D
<code>compress-res*</code>	Cut off trailing blanks, PERMAS page breakings and compress dump outputs.
<code>delete-double-lines*</code>	Deletes all lines with identical predecessor (cursor-advance).
<code>delete-matching-lines</code>	Deletes all lines (cursor-advance) matching a given regular expression.
<code>info</code>	Call the emacs info service.
<code>integer-display*</code>	Display string-, hex-, octal- and binary representation of a decimal integer.
<code>insert-variable*</code>	Insert contents of a user variable at current cursor position.
<code>insert-variable-1*</code>	Like <code>insert-variable</code> but additionally increments variable by +1
<code>ispell-buffer</code>	Spell checking (american) of current buffer with interactive editing.
<code>ispell-region</code>	Spell checking (american) of active marked region with interactive editing.
<code>kbd-macro-query</code>	Query user during kbd macro execution.
<code>keep-lines</code>	Deletes all lines (cursor-advance) NOT matching a regular expression.
<code>menu-bar-mode</code>	Toggle display of a menu bar on top of frame.
<code>new-shell*</code>	Starts a new shell buffer (name incrementing <i>*shell*</i> , <i>*shell-1*</i> , <i>*shell-2*</i> ...)
<code>query-replace</code>	Simple string replace (does not use regular expressions).
<code>rename-buffer</code>	Rename current buffer (e.g. for multiple <i>*shell*</i> buffers).
<code>sort-columns</code>	Sort lines in region for a text rectangle selected by Mark and Point (reverse sorting for a prefix-argument Gold- n with n=-1).
<code>sort-field</code>	Sort lines in region for specified n th text field, where n is the prefix-argument from Gold- n (-n for reverse sorting).
<code>sort-lines</code>	Sort lines in region for alphabetical order taking whole lines (reverse sorting for a prefix-argument Gold- n with n=-1).
<code>sort-numeric-field</code>	Special sort-field function just for numeric fields.
<code>sort-regexp-field</code>	Sort line-parts in region that do match a regular expression for ascending text-part matching a second regular (sub)expression.
<code>tool-bar-mode</code>	Toggle display of a tool bar (icon bar) on top of frame.

*Only available with GOLD-Emacs (others are standard GNU-Emacs features)

Usefull User Variables

Set by Gold-Help or via (*setq name value*) **in the user's** `.emacs_gold` **file**

<code>auto-save-interval</code>	Number of keyboard characters between autosaves (=0 disables autosave).
<code>case-fold-search</code>	The (default) non-nil value tells search functions to ignore letter case.
<code>comment-start</code>	Comment string (single character) for [un]comment-region.
<code>comment-padding</code>	Extra comment string for [un]comment-region.
<code>default-document-type*</code>	Preference for PERMAS documentation (e.g. "intern" or "v80").
<code>fix-advance-caseflip*</code>	nil extends Caseflip function ChnCase→ to ChnCase↔
<code>fix-advance-copycut*</code>	nil makes unmarked COPY/CUT to take mode dependend EOL/SOL.
<code>fix-advance-tab*</code>	nil makes tabulator sensitive to ADVANCE/BACKUP mode (↔).
<code>fix-advance-word*</code>	nil extends WORD→ to ADVANCE/BACKUP sensitive WORD↔

fortran-auto-upcase* nil allows lower case characters in non-comment context of fortran buffers.
 fortran-continuation-char ASCII-Code of character for automatic fortran continuation lines.
 fortran-continuation-indent Additional standard indent for continuation lines.
 fortran-do-indent Additional standard indent for FORTRAN DO-Loops.
 fortran-if-indent Additional standard indent for IF-THEN-ELSE blocks.
 header-string* User's document string to be inserted on subroutine headers.
 indent-tabs-mode Non-nil means that tabulator-functions may insert tab characters.
 insert-variable-width* Minimal field width (and pre-format) used on insert-variable command.
 USER-0*... USER-9* 10 dummy variables intended to be used by user's local macro definitions.
 tags-read-only* Default t forces all INTES-tags functions to load their files read-only.
 require-final-newline Default t inserts missing newline at end of buffer before saving.
 user-extern-name* User's name used for extern sender/adresses in form H. Muster
 user-fax-dir* Default directory for fax command (usually ~/tex/fax/)
 user-kbd-file* Name of file to which save-kbd-macro saves keyboard macros.
 user-two-letter-name* User's name abbreviated by two (upper-case) characters.

*Only available with GOLD-Emacs (others are standard GNU-Emacs commands/variables)

Abbreviations typed in F7X mode (fortran mode):
