1 How to install PERMAS and VisPER

- In case of trouble or questions, please contact our hotline: +49 711 78499 93 or hotline@intes.de.
- If a development version shall be used, a prior installation of the production version is required

Installation procedure:

1. Register for access to PERMAS user services under https://www.intes.de/kategorie_support/permas_support/registrieren
2. You will receive an email with your access data
3. Download the software from https://www.intes.de/kategorie_support/permas_support/login/login/login_page
4. For a first installation, it is recommended to download the full ISO image from the folder named ISO
5. Either burn a DVD or mount the ISO image (Linux: `mount`, Windows: double click)
6. In the root directory of the DVD, the installation manuals for installation under Linux or Windows operating systems can be found. Read the according manual prior to the installation, it contains many useful hints
7. First install the PERMAS license manager permlic as described in the manual
Note: Changing the network settings after the license was requested will make the license invalid !
8. At the end of the installation, it will present a license request form; send this form to sales@intes.de to get a valid license as soon as the contract is signed.
9. Use the permlic installer a second time to place the license file in the correct directory
10. Install PERMAS and VisPER as described in the installation manual, chapter 3 and 4
